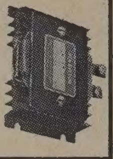
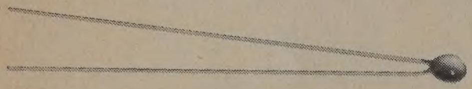
Thermistors and varistors for mil. and industrial applications

PLUSISTOR® POSITIVE TEMPERATURE COEFFICIENT THERMISTORS—Solid State silicon resistors for temperature control or compensation. Approximate + 0.7%/°C temperature coefficient from −60°C to +150°C... Available in ¼ and ½ watt dissipation rating at 25°C, decade multiples of standard 10% resistance values and a choice of bodies and sizes.



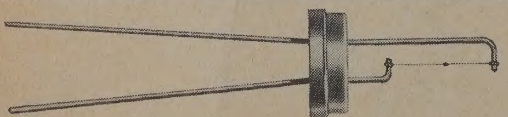
PULSISTOR®—A special thermistor designed into an electric heat sink for surge protection of high wattage loads. Protects or lengthens life of high inrush devices having steady-state dissipations up to 4,000 watts. Effectively applied in filamentary loads, capacitor charging circuits, power supplies, transmitters, modulators.

SYNCHRONOUS CONTROLLER—A solid state temperature controller with standard sensitivities of 0.01°F. Adjustable proportional band controllable from 0 to 2°F. Available with plug connector or barrier strip connection for applications including process control equipment, heating and alarm systems, kilns and drying equipment, constant or variable temperature baths, etc.



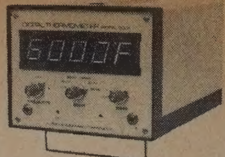
MILITARY GRADE DISK (MIL-T-23648)
Rugged, high reliability, general purpose thermistors . . . temperature range, —55°C to 125°C . . . well-suited for temperature measurement & control applications . . . particularly in transistor circuitry.

BEAD THERMISTORS
For applications involving temperature measurement and control . . . and liquid or gas flow . . . where space is minimal and medium cannot be disturbed by the sensor element . . . such as gas chromatography and thermal conductivity gas analysis. Available in diameters from .005" to .043" for different time constants. Available also with adjacent leads.

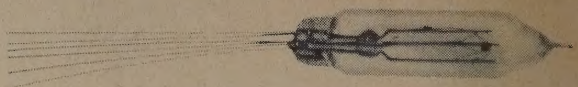


BUTT-MOUNTED THERMISTORS
For simplified application . . . where feedthrough terminals are required . . . bead thermistors are available ready-mounted . . . for gas chromatography and thermal conductivity gas analysis.

BEAD-IN-GLASS BULB—Bead-in-glass bulb thermistors . . . are most advantageous . . . in applications where power sensitivity is a primary concern. Also available in nitrogen atmospheres.



DIGITAL THERMOMETERS—0-600°F thermometer with 1" high brilliant digital characters. No parallax, 7 segment modernistic display. Six probe capacity, variable display rate, compact tilt case, all solid state and moderate cost.



INDIRECTLY HEATED BEAD THERMISTOR
Thermistor bead with separate heater . . . for changing or controlling thermistor temperature . . . where electrical circuit resistance needs adjustment without use of moving parts.

BEAD-IN-GLASS RODS
Bead thermistors . . . with sintered-in platinum alloy leads . . . embedded in solid glass structures . . . air or gas never come in contact with thermistor bead.

BEAD-IN-GLASS PROBES
Hermetically sealed in solid glass . . . with dumet leads . . . resist external mediums, harsh environments . . . impervious to conductive or corrosive mediums . . . unaffected by high density radiation. Available in various diameters and lengths, also moisture-proof seal.

THERMISTOR SENSOR ASSEMBLIES
Complete . . . ready-to-mount . . . for a variety of applications and mounting methods. "SS" series for surface mounting . . . heat sealing or process controls, heat sink and mold temperature measurements, other applications . . . Thermistor beads & probes . . . developed specifically for measurement and control of fluid temperature . . . level and flow in the temperature ranges of liquid oxygen and liquid nitrogen.

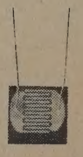
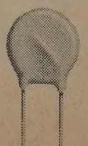
THERMISTOR DISCS, RODS & WASHERS—Much higher power dissipation constants and longer time constants than bead or probe types. Used in applications where these characteristics, coupled with economy, render acceptable performance for temperature compensation, control, measurement, delay, etc.



THINISTOR® THIN FILM THERMISTORS
The latest advance in thermistor technology . . . two basic types . . . 5 micron thick films and 20 micron freestanding . . . both featuring relatively high dissipation constants, short thermal response times, extreme sensitivity . . . for application in microcircuitry, gas chromatography, infrared energy detection, medical instrumentation, many, many more.



VARISTORS
Voltage sensitive resistors . . . exhibit a symmetrical, non-linear change in electrical resistance with an applied voltage change . . . typically applied as noise suppressor in telephone circuits. Useful in volume limiting and metering protection.

PHOTOVOLTAIC CELLS

Photovoltaic cells start with a layer of selenium onto which a junction of CdSe is formed. A subsequent layer of CdO or Au acts as a current collector. The two types are specified as A for the Au layer and B for the CdO type. B is high output for low light and best for use with amplifier. Specify A or B after part number, e.g. S100 EB.

ADVANTAGES OF ALSIMAG® TECHNICAL CERAMICS

MORE MATERIALS

For many decades American Lava has worked with leading firms to develop special ceramics for their advanced designs. The result is the greatest number of special ceramic compositions available from any source. This wealth of ceramic materials can help in two ways. First, it may give you the exact performance you require. Second, it enables you to select the most economical material that meets your design requirements.

MORE PROCESSES

American Lava offers the broadest processing capabilities in the industry. These include forming ceramics by all modern methods including pressing, extrusion, injection molding, isostatic pressing, plus metallization, plating, chemical milling, machining, grinding, lapping, and hermetic bonding.

Many of these processes were pioneered by American Lava. Examples are (1) the ability to produce certain as-fired ceramics to precision tolerances and (2) the proprietary AlSiBase process for producing thin flat ceramics.

MORE SPECIALIZED ENGINEERING TALENT

American Lava, built on engineering ability, has demonstrated that it is the best source for any problem involving technical ceramics.

GREATER PRECISION

Technical ceramics play an increasingly important part in American industry because they can meet especially demanding requirements. American Lava has the experience, know-how and facilities to produce ceramics to the closest tolerances, and to measure and inspect them by agreed means.

MORE MODERN DESIGNS

Technical leadership at American Lava Corporation is based on working with its customers to give them what they want. This currently involves work on composite substrates, composite packages, buried metal patterns, super-smooth and flat substrates, special temperature compensating dielectrics, ceramic capacitors and new ceramic coatings for metal and low expansion glass.

VOLUME PRODUCTION

American Lava has the resources, know-how and the desire to make commitments required to meet volume requirements of its customers. A long parade of firsts in new manufacturing capabilities have allowed American Lava to keep pace with the ever changing need for technical ceramics in volume.

EXPEDITED PROTOTYPES

Special procedures speed the production of prototypes for your evaluation. A chart giving the characteristics of our most frequently used AlSiMag ceramic compositions will be sent on request. Suggestions are available from our specialized engineering staff.

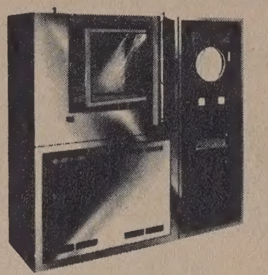
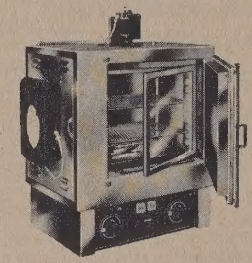
ENVIRONMENTAL CHAMBERS THAT WORK!

FULL RANGE CONSTANT TEMPERATURE/HUMIDITY CABINETS



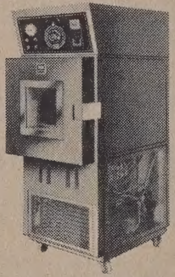
Easily meet every current MIL humidity spec . . . plus a host of even tougher industrial requirements. Automatically perform MIL-202C, Method 106B, Steps 1-7, including Step 7-A (—18°C.) without changing cams. Patented wet and dry bulb POWER-O-MATIC 60® Saturable Reactor Controls provide ±½%°C. performance from −18°C. to +93°C. and ±½% relative humidity throughout 20% to 98% range. Quality features include cam-type programming, separate monitoring recorder, non-cycling mechanical refrigeration, and elapsed time meter.

HUMIDAIRE *AIR-COOLED* TEMPERATURE/HUMIDITY CABINETS



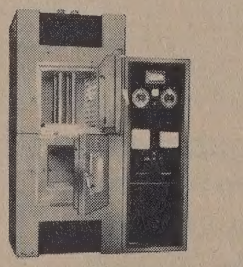
The most accurate, reliable and economical chamber ever developed for long-term high temperature humidity testing. Ideal for such steady state requirements as MIL-202C, Method 103B, Condition D—continuous operation for 56 days. Unique design uses air, not costly conditioned water. Saves thousands of gallons a year, minimizes operating costs. POWER-O-MATIC 60 Control automatically regulates temperature from +12°C. above ambient to +93°C. (±½°C.) . . . R.H. from 40% to 98% (±½%).

VERSA-RANGE REFRIGERATED TEST CHAMBERS

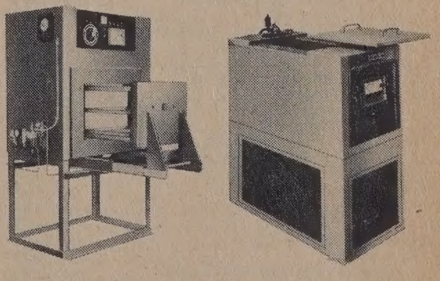


Ranges: −73°C. to +204°C., −40°C. to +93°C., −73°C. to +93°C. and ambient to −85°C. or −40°C. with cascade or single stage mechanical refrigeration. Front and top opening models. Sizes to 64 cu. ft. Above ambient units feature POWER-O-MATIC 60 Control. Also front opening and chest type CO2/LN2 chambers with −73°C. to +204°C., −73°C. to +204°C., −73°C. to +300°C. and −185°C. to +200°C. ranges.

THERMAL CYCLING AND SHOCK TEST CHAMBERS



Dual Thermal Test Cabinets. For Mil. Std. 202C, Method 107B, Conditions A, B, C and F. . . . Mil. Std. 883, Method 1010, Conditions A, B, C and D. 2.3 cu. ft. work chamber moves vertically from cold chamber to heat chamber per spec. −73°C. to +204°C. range. LN_2 for cooling, POWER-O-MATIC 60 controls heating.



Also: 3-Stage Thermal Shock Test Cabinets, left, for Mil, Std. 202C, Method 102A, Preferred Conditions C & D.
Versa-Whirl Constant Temperature Baths, right, for Mil. Std. 883, Method 1011, Conditions A to F. Plus a variety of Thermal Cycling Chambers, bench and floor models, and LN_2 Chambers. Send for brochure.

VIBRATING CAPACITORS

A vibrating-reed type capacitance modulator used to measure currents as low as 10^{-16} amperes. Drift never exceeds ±0.2 millivolts per day, noncumulative. Thus it is ideal where stable performance without recalibration is required for periods of a month or more.

Please write for Catalog 523.

Centralab
Special

We've got a little something special for everybody

Our goal is to eliminate those "almost right" ceramics, discrete components and microcircuits that design engineers often have to contend with. We have developed special design, production and delivery capabilities that enable us to give you precisely what you want:

Ceramic Substrates: These thin, precision materials in 95% and 99.6% alumina provide unexcelled surface finishes and reliability for hybrid microcircuits; and are available in sizes and shapes to meet any design requirements.

Components: Potentiometers, variable resistors, capacitors, push button and rotary switches are all manufactured to rigid standards; and are suited to miniature military, industrial and entertainment applications.

Microcircuits: We've manufactured more than 5,000 different thick-film circuits for test and measurement devices, communications, airborne control equipment, stereos, television, radios and computers. All in all, we have more than 25 years experience in microcircuits, having produced more than ½ billion, more than any other manufacturer.

Many of the products we began making as special, one-of-a-kind units have found such broad usage that they now are standard catalog items. So if you can't find what you're looking for in one of our catalogs, we've got a little something special for you. It may put you on the right track.

Centralab products are marketed direct to manufacturers as well as through Centralab Industrial Distributors and internationally through Globe-Union Inc., International Division.

NEC HAS TAKEN THE LEAD IN MICROMINIATURIZATION OF ELECTRONIC COMPONENTS

Nippon Electric is Japan's foremost manufacturer of Integrated Circuits. Recognizing the vital role of miniaturization in the electronic industry, NEC has perfected mini-microscopic IC's to insure maximum economy, function and durability.

FOR DESK CALCULATORS: The NEC MOS Series (μPD 9 to 16 and PD 100 series) are now available in production quantities, assuring high reliability with very stable performance. NEC will soon begin production of LSI (Large Scale Integration) to meet the industry's growing needs.

FOR INDUSTRIAL USE: NEC's new family of TTL, designated the μPB200 Series, provides total compatibility with standard U.S.A. products. Our μPC55 is designed for use in Operational Amplifiers, and the μPC71 for Comparator applications.

FOR CONSUMER PRODUCTS: The μPC17 is a linear IC for IF amplification in television audio circuits. Performance is excellent in limiting characteristics, linearity of detector and temperature stability. Advanced design concepts make the μPC17 significantly superior to circuits employing the usual discrete components.

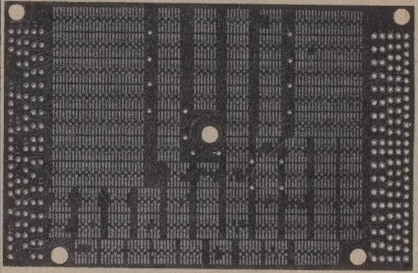
If availability, quality or cost is your circuit board problem...

No problem!



Eight-layer circuit board having 0.006-inch internal line width, with more than 1500 0.022-inch-diameter holes in a 4" x 7" area. Overall thickness of this complex circuit board produced by Superior Circuits is less than 0.050 inches.

If tardy delivery is your headache, try us. We're primed with the people, facilities and know-how to go from artwork to finished P/C boards fast! And no skimping on quality.

If rising rejects are bugging you . . . well, we don't lightly call ourselves Superior. Our quality control begins with incoming material and ends with computerized electrical testing.

If the cost of producing your own P/C boards seems prohibitive, we can probably come to the rescue. We've been over the hurdles that can prove so expensive, and we've learned many ways to effect economies.

If design "producibility" is your hang-up, we can help in design evaluation, in materials selection, in layout, in applying state-of-the-art techniques to fulfill your requirements.

Solve all of your P/C board problems by turning them over to us. Call us. And if you'd like to know more about us, write for our new data kit.

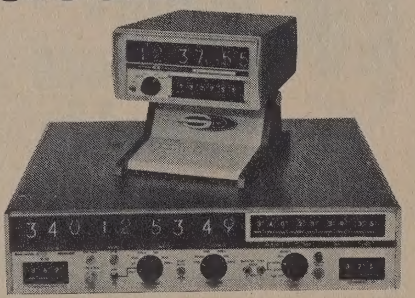
Digital clocks



Full line of digital clocks ranges from a compact $675 model to sophisticated calendar-clocks with stability of 5 parts in 10⁹ per day and provision for synchronization with WWV and WWVH.

All clocks use proven integrated circuits and all-silicon solid-state components in order to maximize reliability. All are designed to be integrated into systems with remote control. Time data is available on parallel BCD outputs, and output time pulses occur at intervals ranging from 0.1 second to 1 hour.

A unique warning device prevents erroneous readings after power interruptions.

Analog Computers

Systron-Donner's solid-state desk-top computers offer maximum problem-solving capacity at minimum cost. Sizes range from 10 to 120 amplifiers—plus multipliers, function generators, and digital control logic. Patchboards are coded with the same symbols used in problem-solving circuit diagrams.

Three basic computers are: Model 3300 Educational Computer (approx. $2,700), SD-10/20 with 22 amplifier capacity ($7,000 to $15,000), and S-D-80 with 120-amplifier capacity ($25,000 to $70,000). Comprehensive 150-page handbook includes instructions for simulating many physical systems without writing the descriptive differential equations.

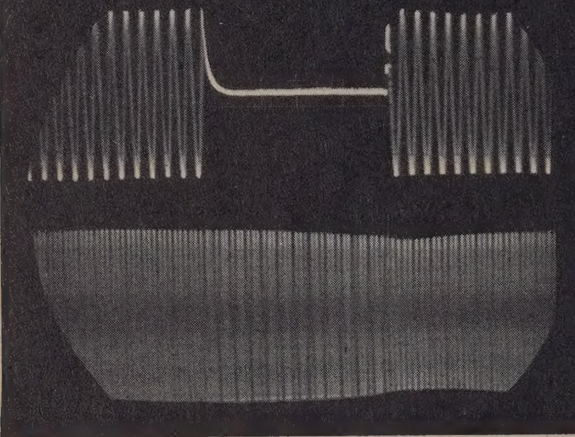
isolated power for computers and numerical controls



Upper trace—Input voltage 60 Hz. Lower trace—Output voltage 180 Hz. Note that with complete power failure for several cycles, energy is still being delivered to the load. Naturally, high frequency Noise or Transients or Voltage Changes are similarly filtered.

NOBRUSH® PERMANENT MAGNET GENERATORS

An exclusive design utilizing Permanent Magnet excitation gives NOBRUSH® Motor Generators their outstanding performance. Absolute electrical isolation between input and output circuits is assured. Motors will accept long-term voltage transients of ±10% with less than 1% change in output and short-term transients of ±30% with less than 1% output variation.

In addition to superior line isolation, NOBRUSH® units offer many design, performance and economic advantages over other methods of power generation and frequency conversion.

High Frequency Output—typically 400 cycle, 3 phase but can be 180 Hz to 840 Hz.

Power Range—150 VA to 25 KVA

Multiple Outputs—eliminates the need for transformers

Very Low Audible Noise and almost Vibration Free Performance

High Overload Capacity

Extremely Low RFI and EMI

Short Circuit Proof

Cool Operation

High Ripple Frequency—makes filter components substantially smaller in size and cost

Small Size—unit may be easily mounted in cabinet as an integral part of entire system

Simplicity of Design (one rotating part) and Rugged Construction assure Highest Reliability and Minimum Maintenance

Units Custom Fabricated to your exact specifications

We
can
SHRINK
Time.

Not really. It just **seems** that way because our A/D Converters are so fast. They have aperture time as small as 0.2 nanosecond! And they convert at word rates from 1 MHz to 25 MHz. Word lengths vary from 4 bits to 9 bits. Sample-and-hold, test circuits, and power supplies are all built in; and all of this costs only $4,200 to $9,660, depending on which of 13 models you choose.

We argued about where this ad should be.

People couldn't agree where this ad should go. Some said it HAD to be in the D/A Converter section, because it's an ad for the HS-2000 Series D/A line. Others said it should go in the function generator section, or the modulator section, or the programmable attenuator section. And so it went.

Why all the discussion? Because our HS-2000 Series D/A Converters can convert from 4 bits at 25 HMz to 9 bits at 10 MHz and be 0.1% accurate in less than 90 nanoseconds. But they can also accommodate external bias and reference signals from dc to 25 MHz, making them useful for a lot of other things. Prices range from $1480 to $1760, for any of six models. With all that, people couldn't agree where the ad should be.

If you don't like where it is, tell the boss. He made the final decision.

The Standard of Excellence

in S/D, D/S CONVERTERS

Composed of reliable, all solid state circuitry mounted on easily interchangeable printed circuit boards, these low cost converters can be used to interface any type of synchro outputs to digital computers, readouts, displays or printers. Or, conversely, they can convert a digital computer output to 3 or 4 wire synchro signals. Although designed especially for the process control and machine tool fields, this system can easily be modified for military applications.

A wide variety of Data Conversion systems are available from Ditran.

INFORMATION ON LACING TAPES?

ASK GUDEBROD!

Your one best source for guidance on electronic wire harnessing is Gudebrod. We've been handling the electronics industry's every special requirement, as well as a good portion of the routine needs, since the very beginning. So, whether you are producing electronic equipment for military use, or for commercial and industrial applications you can get from Gudebrod the latest, most complete data on tape, on tying, to meet the most exacting specifications. Using the right tape is important where there are high temperatures, in cryogenic uses, in vacuums, in humid conditions, in outer space. Correct widths and tensile strengths are important, too. At Gudebrod, we are prepared to give you full, considered answers to your cable lacing questions.

10 times more void-free!

TDK's NEW HIGH-DENSITY FERRITE

Made available by TDK's new manufacturing technique are a series of Mn-Zn and Ni-Zn high-density ferrites with no more than 1% total void, intracrystalline and boundary. Hard (Vickers 600) and adapted to precision machining, the new ferrites are superior even to single-crystal ferrite where cost and magnetic properties (particularly radio-frequency characteristics) are major concerns.

For single and multi-track magnetic heads used in computers and the like, and also for many other ferrite devices involving close-tolerance machining, High Density TDK Ferrites are the logical choice of every engineering designer.

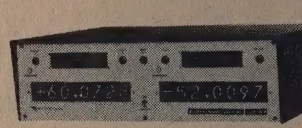
Complete range of bi-directional counters

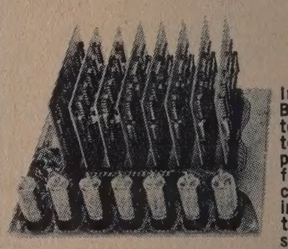
Industrial-Class Counters

Single- and multi-axis Bi-Directional Counters are especially designed for industrial use, feature a rugged steel cabinet and all-TTL integrated circuitry on plug-in PC cards, and offer the high noise immunity needed in industrial environments with high-speed capability as well. Single-axis, dual-axis and triple-axis counters are offered in table model as well as rack or "pipe-stand" mountable configurations. Application areas include measurement and control of position or speed for machine tools as well as numerical and process control systems. Counters furnish +12V or +5V encoder supply.



Instrument-Class Counters

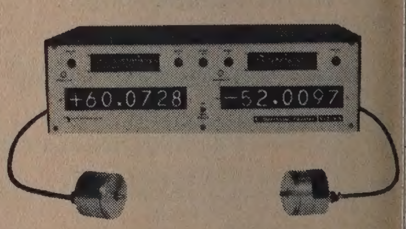
Integrated-Circuit, Bi-Directional Counters have been designed specifically for instrumentation and process-control systems or for any application requiring the net accumulation of bi-directional increments. Counters furnish +12V or +5V encoder supply.



Counte Module

Integrated Circuit Bi-Directional Counter Module is intended for use as plug-in componen for measurement control and digita instrumentation systems, and is ideall suited to any application requiring the net accumulation of additive an subtractive increments.

DIGITAL POSITION READOUTS



Consists of (1) Bi-Directional Counter, (2) OPTECO shaft position encoder, and (3) interface cablin Provides a highly practical solution to proble of digitized measurement and control of rot tional or linear position. Application areas inclu machine-tool and process control, tracking, serv systems, and digital instrumentation in genera

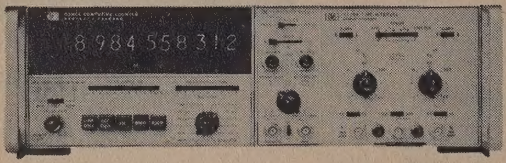
ELECTRONIC COUNTERS



5360A

A revolutionary instrument for greatest measuring capability

Internal computer makes measurements more automatic and solves equations whose variables are the counter's measurements. Can convert counter into a completely different instrument (e.g. phase meter).

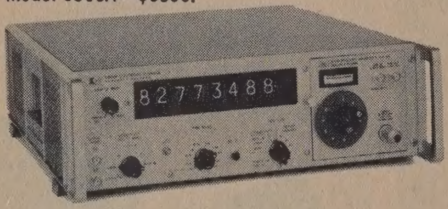
1000 times faster than other counters.

Measures pulsed frequencies—even a single pulse, with direct readout.

Up to 300 frequency measurements/s, 1000 time interval measurements/s.

Time interval resolution is 0.1 ns.

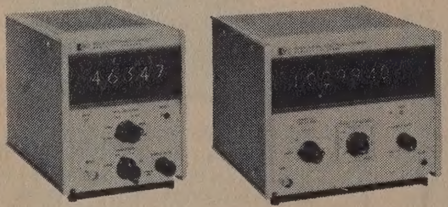
Model 5360A—$6500.



5245M

GENERAL PURPOSE COUNTERS

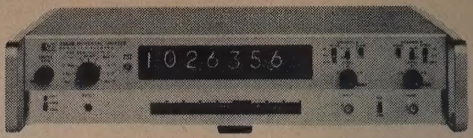
These versatile 50 and 135 MHz counters can use plug-ins for: frequencies to 18 GHz (40 GHz systems available too), measuring intervals to 10 ns, voltage to 1000 V, or for count limit detection and units conversion. Models 5245, 5248—$1800 to $3300.



5221B and 5216A

LOW COST COUNTERS

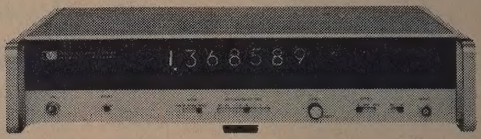
Economy without sacrificing quality . . . 10 MHz counting and accurate timing as low as $425 (Model 5221A). More versatile units available too: 5221B ($775) and 5216B ($985).



5325B

UNIVERSAL COUNTER

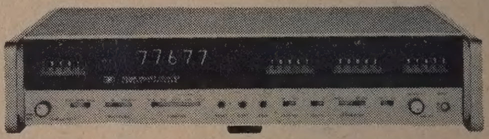
For best versatility at medium cost. Makes frequency measurements to 20 MHz, also ratio, period and highly versatile time interval measurements down to 0.1 μs. Model 5325B—$1300.



5323A

AUTOMATIC COUNTER

Automatic range selection, 0.125 Hz-20 MHz. Gives the speed and accuracy of period measurement but with direct readout in frequency. Excellent for automatic systems or accurate, convenient, low frequency measurement. Model 5323A—$2150.



5330B

PRESET COUNTERS

For normalizing measurements to engineering units, use the 53330A, $1200. Or, to add go-no-go count limit control and pulse generation use 5330B, $1550.

For go-no-go count limit control and digital delay generation, four models: 5331A/B, 5332A/B, $950 to $1200.

REVERSIBLE COUNTER

Adds or subtracts the count on two input channels for position measurement, etc. Model 5280A—$1200.

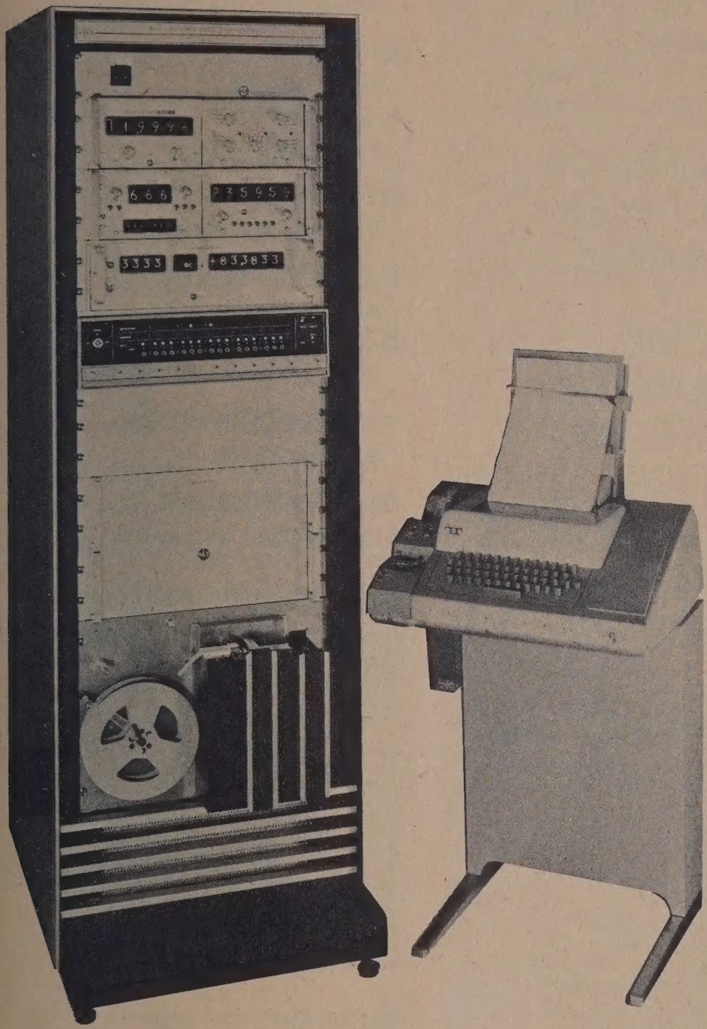
Data Acquisition Systems

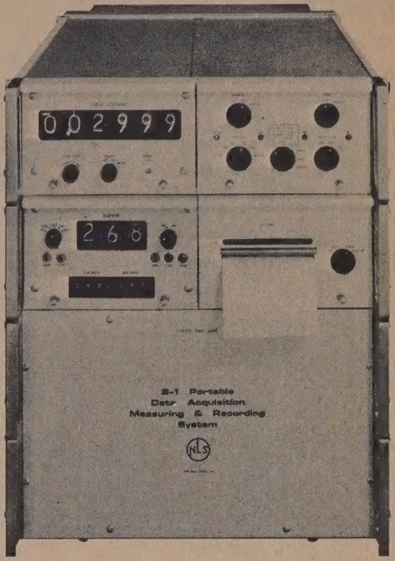
S-5 Computer Data System -

The heart of the S-5 Computer-based Data System is the 102000 Interface which allows a wide customer choice of digital computers. The 102000 Interface is compatible with most second & third generation data machines, and will service a variety of input & output peripherals. The S-5 also includes a unique visual display for engineering units or raw data output. The S-5 can be used for solving, running averages, flow rates, temperature coefficients, strain gage rosettes and other engineering analyses.

The S-5 modular building concept permits analog inputs of AC, DC, Resistance and frequency as well as external digital data. Up to 1000 three-wire inputs can be serviced.

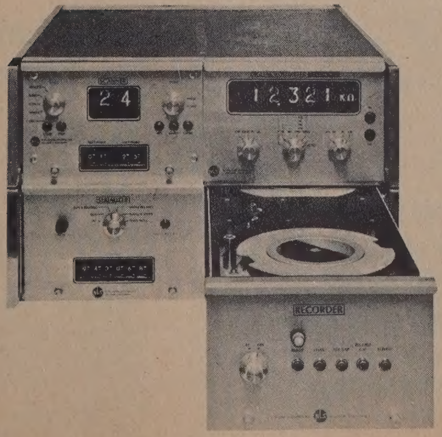
The S-5 will service many output peripherals such as X-Y plotters, magnetic and punched tape, CRT terminals, and data printers.





S-1 Data Acquisition Systems -

A modular building-block concept for data logging. The basic system handles 200, three wire inputs; measures DC from 1 µV to 750 VDC, AC from 10 µV to 500 V. Resistance from 0.1 milliohms to 120 Megohms, and Ratio. Inputs are switched by a fully-programmable crossbar scanner to a five digit DVM with a sixth digit 20% over-range. Output options include magnetic tape, punched paper tape, Flexowriter, punched cards, printer and teletypewriter. Other options include a digital clock, function programmer, reed relay expansion up to 1000 three wire input channels.



S-2 Portable Data Acquisition Systems -

The S-2 System offers a computer compatible incremental magnetic tape output and 25 input channels, all in a 10½" high package. The modular design consists of a 25-channel programmable scanner, a four digit integrating DVM with a fifth digit 20% overrange, a parallel-to-serial converter, and an incremental magnetic tape recorder. The system is completely programmable to accept a mixture of DC voltage, AC voltage and Resistance. A skipping of unused channels feature is standard in the S-2 System.

NLS maintains a staff of expert design and application engineers to assist you with special requirements.

LUMPED CONSTANT DELAY LINES

CUSTOM-BUILT

Allen Avionics, Inc. manufactures a wide variety of delay lines to customers' specifications. The following specifications encompass areas in which we normally work. If, however, your requirements fall outside of the following parameters, we would still be interested in hearing from you.

RANGE — Delay times from 3 nanoseconds through audio ranges are available.

TIME DELAY/RISE TIME RATIO — Time delay to rise time ratio to 300/1.

CONSTRUCTION — Units are hermetically sealed in metal cans with glass to metal terminals. Epoxy encapsulated units are also available.

SIZE — Sizes are available from ⅝ x ⅝ x .450 inches.

TOLERANCE — Normal tolerance on time delay is 5%. In most cases tolerances of 1% can be held.

TEMPERATURE — Most of our lines are manufactured to 50 parts/million/degree C from minus 55 degree C to 105 degree C.

DELIVERY — Prototypes of special lines can often be delivered in a week or two.

Our engineering staff is always available to help with any delay line and application problems.

LUMPED CONSTANT DECADE DELAY LINES TYPE "D"

Type "D" Variable Decade Delay Units are engineered to provide variable time delays with absolute stability for accurate triggering and excellent reproduction of the input pulse. These lumped constant delay lines are completely passive. All models have a minimum of 1000 to 1 resolution and consist of three or more decade switches. Any delay output of Type "D" decade delay unit is the summation of individual lines. It is not the result of a tapped line. This feature is an important factor in eliminating undesirable reflections in the output pulse. Accuracy at any delay exceeding 1% of the unit's total delay is within 3%. These units have a characteristic impedance of 500 ohms in and out. While the units listed are standard, other delays and impedances can be manufactured to specifications.

* Since the Quick Line is a tapped module consisting of 10 sections, the tap increment of any module can be determined by dividing the module time delay by 10. Modules of the same impedance can be put together in groups of 1, 2, 3 and 4 to achieve different time delay and rise time combinations.

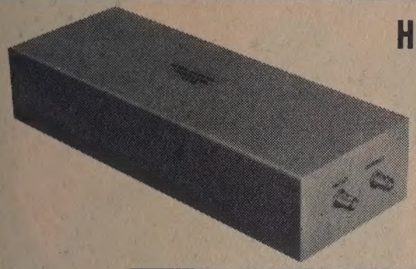
LUMPED CONSTANT DELAY LINES



HIGHEST $\frac{\text{TIME DELAY}}{\text{RISE TIME}}$ RATIO EVER BUILT!

These Delay Lines have the highest ratio of time delay to rise time that has ever been built in a Lumped Constant Line. Unlike other types of high ratio lines, the Lumped Constant Delay Line has a passband from D.C. to its cutoff frequency and maintains a constant delay over these frequencies. These lines are also unique in that they offer relatively low insertion loss.

This group of lines is characterized by tight time delay tolerances, low pulse distortion, excellent phase linearity and good temperature stability.

For laboratory use, any time delays from 10 microseconds to 100 microseconds can be built into variable decade instruments with ratios of over 100/1. These units could have a resolution of up to 1/5000 of the total delay.

Series "HF" HIGH FREQUENCY

The HF Series in most cases will serve as more than adequate electrical replacement for coaxial cable. The inconvenience of handling and storing cable will thus be eliminated. Standard impedances of 50 and 75 ohms are available. Units are normally supplied with BNC connectors. Tapped lines and time delays other than those shown below can be supplied.

Series "VHR"

The "VHR" Series have a characteristic impedance of 50 ohms. While the units listed are standards, we can manufacture the "VHR" Lines to your exact delay specifications.

These units are hermetically sealed in a metal can 3½ x 6½ x 16 inches, with four ¼ x 20 studs on the 6½ x 16 inch surface.

Two BNC connectors are located on the 3½ x 6½ inch surface for input and output connections. Variable Decade Delay Units can be manufactured for laboratory use from the "VHR" Lines.

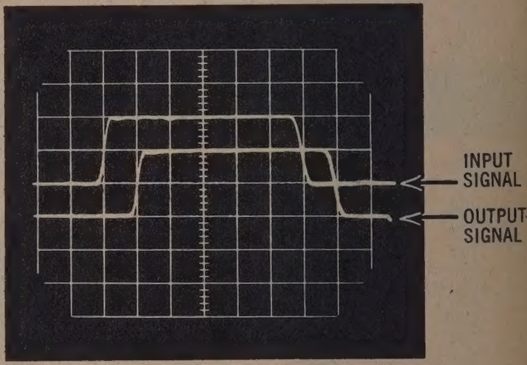
FOR IMMEDIATE DELIVERY!

SPIRADEL is a small diameter, distributed constant fixed delay line, featuring higher delay to rise time ratio and excellent pulse fidelity. Its new shape offers greater package design versatility than most other delay lines available, and the entire unit is encapsulated for maximum environmental protection.

The SPIRADEL line covers a delay range of 20 to 6000 nanoseconds. Any delay within this range may be selected. Time delay to rise time ratios range up to 30 to 1. Any impedance from 150 to 600 ohms is available. Standard delay tolerance is 5%, although tighter tolerances can be held.

SPIRADEL units are designed for operation from —55°C up to +105°C. Bandwidth is from DC to the frequency f = .35/rise time.



Actual oscilloscope presentation photo of input and output pulses of 100 ns. Spiradel, illustrating excellent pulse fidelity.

When you want high efficiency delay lines specify Kappa Super-η*

*SUPER-η LINES embody a new design principle providing the highest efficiency yet obtainable in lumped constant delay lines. Use of network synthesis techniques rather than conventional m-derived methods results in sharply improved delay line efficiency. Compared to ordinary lines of any given delay, KAPPA SUPER-η lines provide linear performance over a much greater band width. In addition these newly developed lines offer such outstanding advantages as: greater inherent reliability, smaller package size, and appreciable cost reduction.

SUPER-η LINES FOR VIDEO SYSTEMS

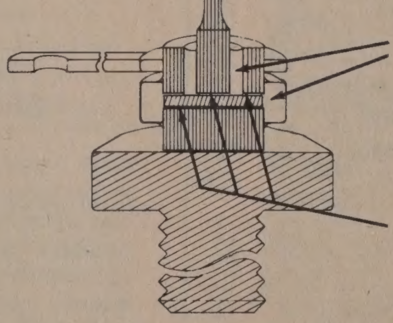
UNITRODE
invents the 12 amp
UCR –
the industry's first fused-in-glass SCR.

It has so many superior features it deserves to be called "something else".

- **Ideal for pulse modulator applications**
- **Smallest medium-power SCR**
- **Efficient switching of high pulse currents**
- **Peak repetitive pulse current 150A in high frequency modulators**
- **Anode voltage 100 to 600V**
- **Low forward voltage drop**
- **Forward current 12A**
- **Peak gate current 100A**
- **3.5°C/watt thermal impedance**

TAKE A LOOK AT THE WAY IT'S BUILT



Two fused-in-glass seals melted, wetted and fused to both silicon and metal surfaces permanently protecting and stabilizing the SCR die in a voidless Unitrode package.

Thermal coefficients of glass, pins, and silicon are matched to withstand extremes in temperature shock and cycling.

True metallurgical bonds from terminal pins to the silicon provide rapid heat transfer and high current capability.

NEC "ESVAC" (Epitaxial Silicon Capacitance Diode) includes three groups: 1S1617, 1S1618 and 1S1619. Our outstanding Capacitance Diodes utilize "Hyper-Abrupt Junction", (the rate of junction capacitance varying with applied voltage). Especially recommended for use in automatic gain control, automatic frequency modulation, phase modulation and voltage tuning circuits, with high reliability and excellent temperature characteristics. NEC ESAKI DIODES are recommended for high-speed switching applications. Specifications available upon request.

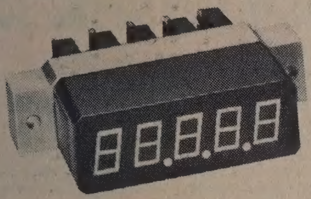
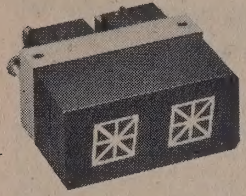
TUNG-SOL DIGITAL AND ALPHANUMERIC READOUTS

INCANDESCENT TYPES



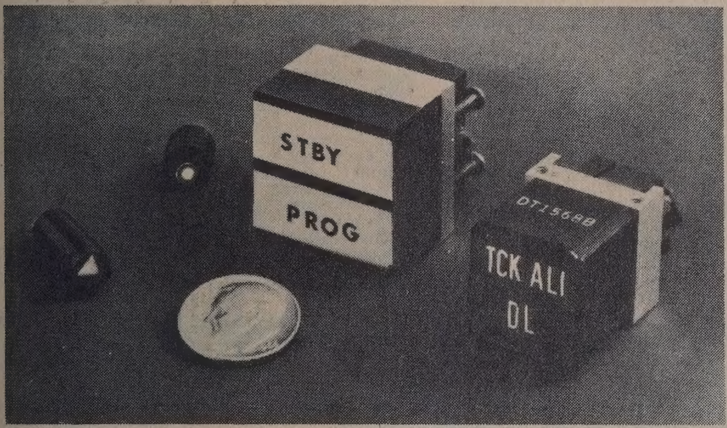
7 SEGMENTS—Display 0 through 9, plus 13 letters. Character size: .32" high, .19" wide, .05" slope. Spacing: Integrated—.3125" c. to c. Stacked—.500 c. to c.



16 SEGMENTS — Full alphanumeric display. Character size: .32" high, .33" wide, .05" slope. Spacing: Integrated—.625" c. to c. Stacked—.807" c. to c.

STACKED—Digits as well as lamp blocks are individually replaceable, for each digit. 70 ma and 20 ma lamp blocks are interchangeable.

INTEGRATED—Monolithic construction requires less width per character. Permits precise alignment of digits in line and in plane. Individual lamp blocks are replaceable.



STATUS INDICATORS—Fixed messages, or symbols, to customers specifications. Supplied in types readable when off or completely blank. All have the clarity and high visibility characteristic of all Tung-Sol readouts.

Tung-Sol incandescent readouts and status indicators provide optimum contrast under high ambient light conditions. Filtering attenuates the reflection from unlighted segments to assure maximum definition of the display. Light shades are not needed. Tung-Sol readouts are designed to function in extreme environmental conditions. They are available with seven segment characters or with sixteen segments which provide full alphanumeric display. Made in both stacked and integrated styles. Special fixed characters can be supplied. The 20 ma and 70 ma lamp banks are mechanically interchangeable.

QUALITY RELIABILITY

Engineered for use in place of the usual read-out tube, for integrated circuit applications where lower voltage supply requirements are desirable. The NEC electron tubes provide "Uni-Planar" display of numerical figures, mathematical symbols and characters. Uniquely efficient performance is due to composition based on green phosphor coated segments, charged with electrons imparted from a directly heated filament.

AUTO-MATED DRAFTING PAYBACK IN 1½ YEARS

Very few capital equipment requests can be accompanied with a 1½ year payback expectation. If your firm constantly strives to reduce its overhead and increase the quality and efficiency of its operation, be sure your drafting department has evaluated the Mergenthaler DIAGRAMMER—an automated push-button drafting system. Users have experienced increased output of better than 4 to 1 over manual methods — 30 to 1 when drawing data is furnished in digitized form — plus receiving superior, "better-than-inked" quality that is geared to the requirements of today and tomorrow's information storage, retrieval and data transmission systems. For DIAGRAMMER details and user payback testimonials, contact Automated Drafting Systems, Mergenthaler Linotype Co., a Division of ELTRA Corporation, 300 East 42 Street, New York, N.Y. 10017. The Lightweight Headset... For Modern Communications

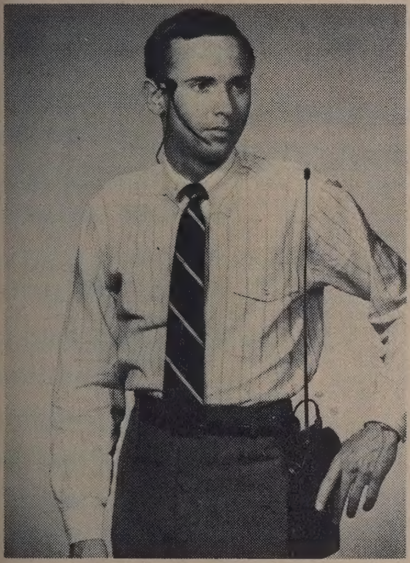
Now Preferred For:

■ Office Use ■ Space Communications ■ Telephone Switchboards ■ Aviation ■ Mobile Communications ■ Portable Radios ■ Safety Mask Communications ■ Base Station Radios ■ Dictation Units



When designing equipment that calls for headsets, specify PPI — and you'll be getting the finest headset on the market today. Each unit combines light weight (2 oz.), space-age design, comfort and reliability — and comes with a patented acoustic transfer tube which delivers distortion-free voice transmission year after year.

Operating entirely *hands-free*, the lightweight units are ideal for such operations as safety-mask and portable radio communications.

Standard models for most applications are in stock and available. We also design units to mate with custom OEM equipment. (Motorola uses PPI headsets as a standard accessory item on many of its products, and NASA turns to PPI for the bulk of its headset needs.)

Although you design the finest communications equipment—remember, its output can be no better than its input. Go with the input leader—PPI.

For the engineer who refuses to stagnate

HALF THE WORLD is half asleep! Men who could be making twice their present salaries are coasting along, hoping for promotions but doing nothing to bring themselves forcefully to the attention of management.

They're wasting the most fruitful years of their business lives...throwing away thousands of dollars they may never be able to make up. And, oddly enough, they don't realize—even remotely—the tragic consequences of their failure to forge ahead while time is still on their side.

Engineers, and other technically-trained men, are particularly prone to "drift with the tide" because their starting salaries are reasonably high, and promotions come at regular intervals early in their careers. It isn't until later—too much later in many cases—that they discover there are definite ceilings on their incomes.

Send for your free copy of "Forging Ahead in Business"

If you want to discover how to succeed while you are still young—if you want to avoid the heartbreak of failure in later years—send today for *"Forging Ahead in Business"*...one of the most practical and realistic booklets ever written on the problems of personal advancement.

"Forging Ahead in Business" was written for ambitious men who seriously want to get to bedrock in their thinking about their business future. If you feel it is meant for you, simply fill in and return this coupon. Your complimentary copy will be mailed to you promptly.

tandard Features

- **Matched, Complementary, Push-Pull, Photo-Transistors:** compensate for temperature and light variations; provide extra noise-immunity.
- **Fully Integral Circuitry:** provides square-wave or pulse and/or zero outputs.
- **Single, Long-Life Lamp:** derated for 150,000 hours operations; heavy filament, high shock-resistance.
- **Rugged Construction:** all-metal packaging.
- **Hysteresis Feedback:** assures jitter-free operation.
- **Single, Non-Critical Voltage Supply (±5% tolerance):** provides flexible and economical operation.
- **Very High Shock-Resistance:** assured through a specially designed plastic code disc, and wide-gap spacing between code disc and mask.
- **IC (Linear) Detectors:** current sensing to minimize time constant.
- **Very High-Speed Capability:** pulse rate to 1 MHz.
- **Positioned Zero Level:** gated from A-track and B-track between pulses.
- **Long-Term Stability:** 90° phasing accomplished physically in mask.

THER ENCODERS

HOTOSYN is a high-precision optical encoder available ith incremental or absolute readout with increment r electronic sampling at rates up to 1 MHz/sec. ERNISYN is a high-precision, magnetic, non-contact haft encoder with full-scale vernier and complete-erimeter pickoff. INCRESYN magnetic incremental haft encoders are especially designed for digital ontrol and readout, and allow direct conversion f shaft position to final readout format. ROTOSYN, compact, absolute magnetic non-contact shaft posi-on encoder, provides a serial pulse-train output herein the total count of pulses in each burst directly orresponds to the shaft position.

The new non-contactive encoder,

Magcoder from Tokin. A non-contactive analog-digital converter. With longer life, higher speed (10,000 rpm). Used in telemetering, industrial robots, automatic control NC devices.

Works better, costs less, because...

1. **Magcoder is friction-free.** Magnetic saturation principle has no readout abrasion, eliminates faulty contact during high-speed operation.
2. **Magcoder has double head.** This does away with wrong readings.
3. **Magcoder is dust-proof.** Which means stable operation, any conditions.
4. **Magcoder has less drive-torque.** Which means no mechanical effect on controlled object.
5. **Magcoder doesn't use precious metals or photocell elements:** so less cost.
6. **Magcoder has unique Tokin design**—which cuts price lower even than other non-contactive encoders.

STANDARD FILTERS

FOR HIGHEST SELECTIVITY

Standard filters are designed by modern network methods for minimum stop to pass band ratios. Applications are those requiring optimum utilization of frequency spectrum.

CUSTOM FILTERS

Low, band or high pass and band stop filters with optimum characteristics can be supplied to your special requirements and MIL-F-18327. Construction utilizes toroidal inductors and high quality capacitors of special films or silvered mica, according to frequency and space requirements. Operating frequencies range to 10 mc/s. Temperature stabilization for both amplitude and frequency can be effected. Mechanical styles may be epoxy encapsulated or hermetically sealed steel in sizes from 0.2 to 200 cu. in.

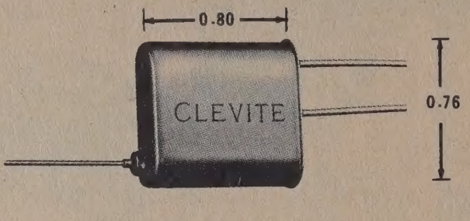
Clevite Quartz Filters

for the man with designs on something better.

Small, lightweight and rugged. Ideal for matching IC circuitry in communications receivers operating in the VHF and UHF frequency ranges as well as in telemetry, radar and aerospace systems.

Independent Mode Quartz Uni-Wafer Filter



Four-pole crystal filters with center frequencies of 10.7MHz, 15MHz 20MHz, and 30MHz. Except for termination, each filter is contained complete in a standard HC-6/U crystal can. Typical characteristics are: ripple 1db peak to valley and temperature stability ±.005 percent maximum from —40° to +85°C. Outstanding advantage is its small size (¾" x ¾" x ⅜"), light weight and good electrical isolation.

In addition, an independent mode filter gives higher spurious mode supression than a coupled mode filter. Special independent mode filters are also inexpensive to tool.

Independent Mode Uni-Wafer filters are smaller than standard quartz filters by a factor of at least three to one. They are characterized by fewer interconnections and higher selectivity per unit volume.

Specials are available as follows: 10.7MHz to 60MHz—bandwidths .02% to .3% of center frequency.

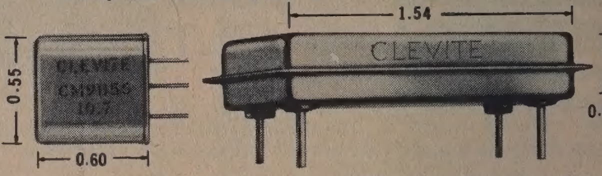
Coupled Mode Quartz Uni-Wafer Filter



Available in two-, four- and six-pole models with center frequencies ranging from 10.7MHz to 30MHz. These monolithic filters offer IC compatibility, low insertion loss and high stopband rejection. Standard two-pole models are provided in solderseal packages. Four- and six-pole filters are provided in coldweld packages.

They were developed using Clevite's original thin film approach to quartz filters. Arrays of resonators are achieved on a single quartz wafer. Spurious suppression is controlled by the trapped energy principle.

Performance of these computer designed filters is achieved by carefully controlled elastic coupling between metal plated regions.

IMPEDANCES: Terminating impedances will run between 5000 ohms and 6000 ohms depending upon frequency and bandwidth. The 30kHz at 10.7MHz will be in the 6000 ohm range and the 9kHz at 30MHz will be in the 500 ohm range with all others in-between. Specific impedances will be determined at the time a design is finalized.

CRYSTAL FILTERS

Crystal Filters; LC Filters
Crystal Discriminators

Miniaturized crystal filters designed for use where extreme selectivity and stability must be combined with minimum volume. Under one roof are facilities for designing and producing crystal filters as well as filter crystals. This assures fabrication of highly reliable crystal filters and discriminators. Sherold has also designed and is producing monolithic filters in volume.

CRYSTAL
FILTERS

Microsonics, Inc. has designed and developed phase tracking crystal filters, in which the phase between filters will track within close tolerances, over wide temperature ranges, without temperature control. Any one of the standard multi-pole filters such as Butterworth, Tchebycheff, Bessel, etc. may be obtained with phase tracking requirements. In the event of tight tracking requirements, the filters are produced in matched sets according to the customer's requirements.

The set of 3 filters shown above have been produced in production quantities and the specifications are shown below.

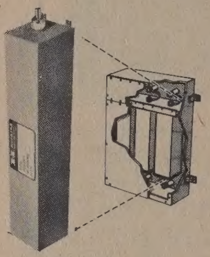
POWER FILTERS

Hopkins Power Line Filters are designed, built and tested to deliver maximum trouble-free continuous service year-after-year. Available as individual power filters, or housed in cabinet assemblies, these units are intended for use in shielded enclosures, secure installation and general power applications. They are available in various current ratings from 1 AMP through 200 AMPS.



1960 Series

The 1960 Series filters furnish 100 DB of attenuation from 14KHZ to 10GHZ when measured in accordance with Mil Standard 220A load conditions.

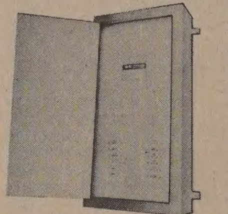
12600 Series

The 12600 Series filters furnish 100 DB of attenuation from 14KHZ to 10GHZ when measured in accordance with Mil Standard 220A. Also measured under full load conditions from 14KHZ to 20MHZ with special buffer networks to allow valid measurements below 100KHZ.

1776 Series and 1620 Series

Filters are also available in single and dual circuit units offering lower performance characteristics when required.

RF SHIELDED & FILTERED CIRCUIT BREAKER PANELBOARD



Hopkins R-F Shielded and Filtered C/B Panelboards are intended for use in installations where secure communication is mandatory. The unique design of these Panelboards maintains shielding integrity with the cabinet door **open.** Designs are available utilizing both the 1960 Series and 12600 Series filters. Circuit Breaker Complement must be specified when ordering.

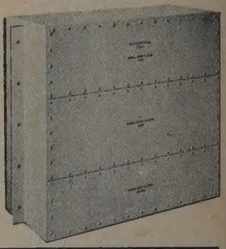
COMMUNICATIONS/ SIGNAL LINE FILTERS

258B-S2

This unit is a Voice and Signal Line Filter offering 100 DB attenuation from 14KHZ to 1GHZ per Mil Standard 220A with outstanding reliability. Originally designed for use in 600 OHM balance system, it has been widely used in other applications such as Secure Communications.

F-4386 & F-4386-1

These Voice and Signal Filters are designed to meet the requirements of DCA Cir 175-6A Application #1. They are single circuit bulkhead mounting tubular filters intended for cabinet installation.

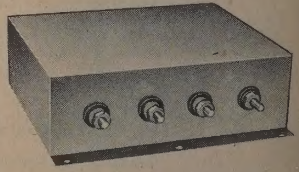


Special cabinet designs are available incorporating any number of the above filters modified for cabinet installation. These units are constructed with an R-F Shielded bulkhead between input and output housings in order to maintain shielding integrity required for secure installations.

UL RECOGNIZED FILTERS FOR DATA PROCESSING EQUIPMENT

The 44 Hopkins RFI Filters designed expressly for data processing equipment provide maximum suppression of Radio Frequency Interference and other extraneous signals detrimental to efficient operation of data processing equipment.

Hopkins RFI Filters are designed and tested to deliver maximum, trouble-free duty for many years.



You will speed production and save both time and money in the manufacture of your data processing equipment when you specify, whenever possible, off-the-shelf Hopkins RFI Filters which are included as recognized components.

The Hopkins line offers the widest selection of RFI filters recognized under the component program of Underwriters' Laboratories, Inc.

U.L. Yellow Card listings available upon request. Available in various amperage ratings and case styles.

Now, more than ever, your No. 1 source for all RFI/EMC filters.

Subminiature Ceramic Types?

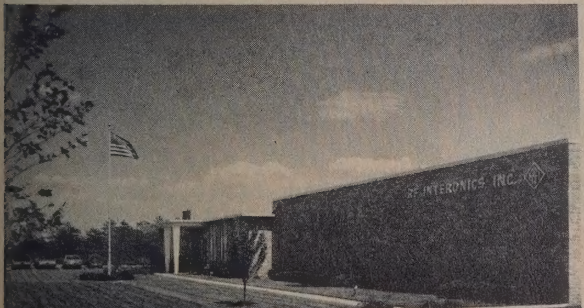
We were one of the first. Three basic lines to choose from—50 VDC, 100 VDC and 115 VAC.

Something Bigger?

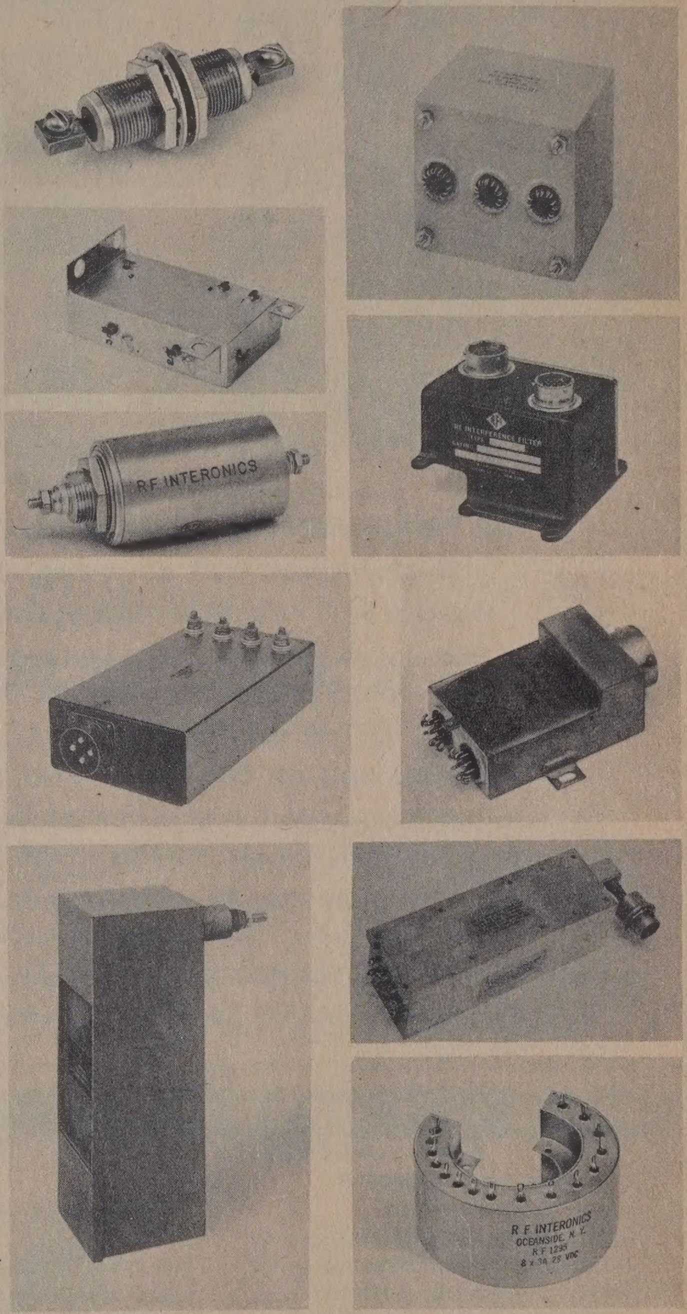
We've got them, too. *Thousands* of proven types available as standard or custom-engineered assemblies. Ratings from 1 milliamp up to 2,000 amps, from 0.1 volt to 20,000 volts, from fractions of an ounce to more than 1,000 lbs.!

Complete Capability, that's our story.

We produce to MIL-F-15733E or, where required, to NASA or other high-reliability specs.



The RF Interonics facility is the most modern of its type in the country, and is industrially engineered for the efficient manufacture of high reliability radio frequency filters and capacitors. The plant is fully air conditioned and humidity controlled. Clean rooms are maintained for capacitor winding and the assembly of NASA quality filters. A complete in-house capability includes sheet metal fabrication, inductor winding, vacuum impregnation and all necessary processing and test equipment to assure adequate control and quick-reaction time.



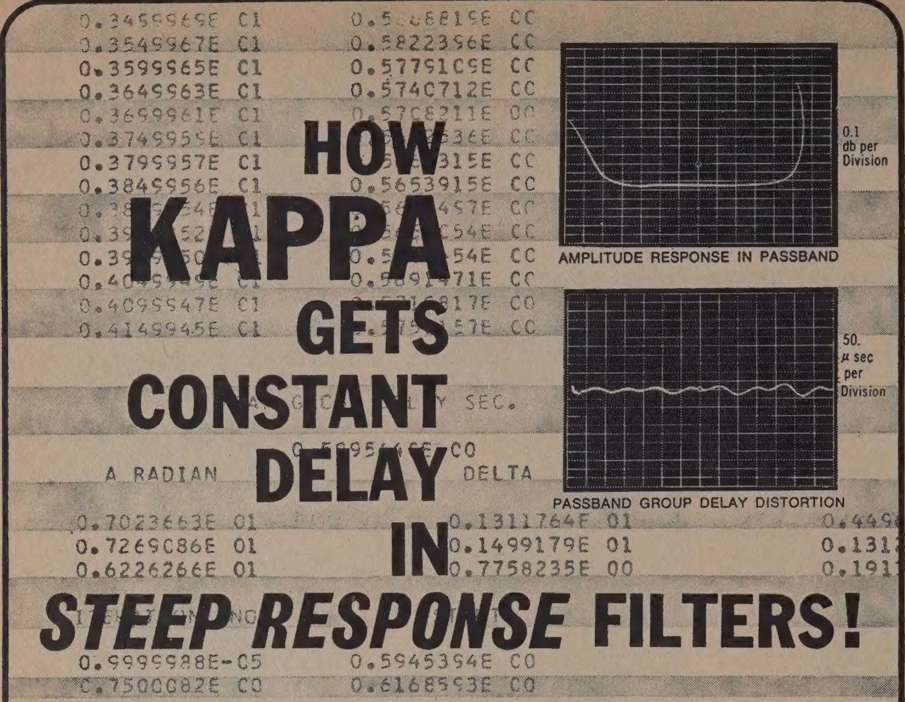
CYLINDRICAL FILTERS. Covering a broad range of current and voltage ratings, providing high attenuation over the complete RF interference spectrum.

MULTI-CIRCUIT FILTER PACKAGES. Many circuits in one compact filter assembly. Incorporating the input connector eliminates need for a separately-shielded RF compartment.

SINGLE-CIRCUIT FILTERS. Chassis-mounted (utilizing mounting brackets), or bulkhead-mounted (through a panel that isolates filter input from output).

SHIELDED ROOM FILTERS. Easily bulkhead-mounted directly to shielded enclosures or equipment panels. Removable access covers on shielded side (often an RF leakage source) have been eliminated.

FEED-THROUGH CAPACITORS. Designed and built to exceed MIL-C-11693. Available in a wide range of current and voltage ratings, with attenuation over a broad frequency range.



HOW KAPPA GETS CONSTANT DELAY IN *STEEP RESPONSE* FILTERS!

Difficult? . . . of course! . . . but
WE PROGRAMMED A GENERAL SOLUTION
in double precision **FOR** a high-speed digital computer,
to enable us to meet the demands of systems
requiring delay distortionless transmission.
ANY PREDETERMINED ENVELOPE DELAY
can now be attained
BY ITERATION OF THE POLES AND ZEROES
of a complete system with up to 50 equalizer sections.
By **ACHIEVING EQUAL RIPPLE RESPONSE** this
method outperforms any other equalization technique in minimizing
delay distortion. KAPPA design engineers
can assist you in attaining **ECONOMICALLY** an improved accuracy of
time correlation between signals in data transmission systems.

NEED A FUNCTION?

y equals tangent x; y equals sine x; y equals log x; y equals arctangent of a constant times the tangent of x; y equals one plus exp x all to the two sevenths power; pressure vs. altitude; and many other functions with reasonable first and second derivatives may be generated with NONCIRCULAR GEARS. Used with synchros, resolvers, potentiometers, or other devices, NONCIRCULAR GEARS provide an accurate, stable, long lasting means of generating a desired function.

PATTERN GENERATOR

The Model 819D pattern generator is a fully solid state precision instrument for testing and evaluating communications systems at speeds up to 10,000 baud. It generates a single repetitive test signal, a switch selected character of 3 to 14 information bits in any combination of MARK and SPACE (sync or Start/Stop), and an 80-character, 5-level (Baudot) code message programmed for the standard "FOX" message. A second message of up to 128 characters at 8 levels can also be provided. An external timing input enables character-by-character transmission of the selected format as well as bit synchronization. Individual character transmission can be controlled manually.

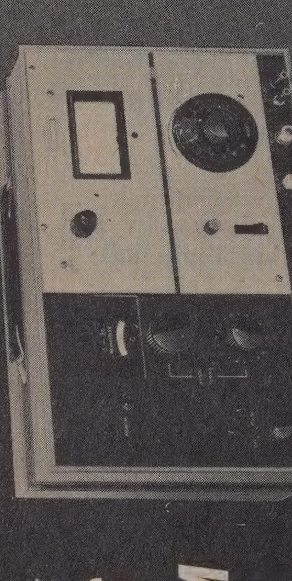
SIGNAL GENERATORS FOR AM & FM TO 1000 MHz



MODELS 180 & 180R AM Signal Generators provide for fast, precise alignment of complex RF radio and TV circuitry. Model 180 covers 2 to 400 MHz; Model 180R:5 to 475 MHz. Direct reading scales and dials, and individually calibrated frequency dials. Manual or automatic controls provide accurate output voltages at all levels. Solid state supply delivers regulated voltage to oscillator. Provision for external pulse modulator. Convenient stacking or rack mounting panels.

MODEL 188 FM Signal Generator is designed specifically for laboratory and production line testing of hi-fi FM receivers. Two-speed tuning for fast frequency setting. Incremental knob for extremely fine tuning. Internal or external modulation measured in three convenient ranges without external audio voltmeter. Solid state supply provides regulated plate, heater, and audio modulation voltages. Double shielding minimizes RF leakage. 50-ohm source impedance with low VSWR; wide deviation with exceptionally low distortion.

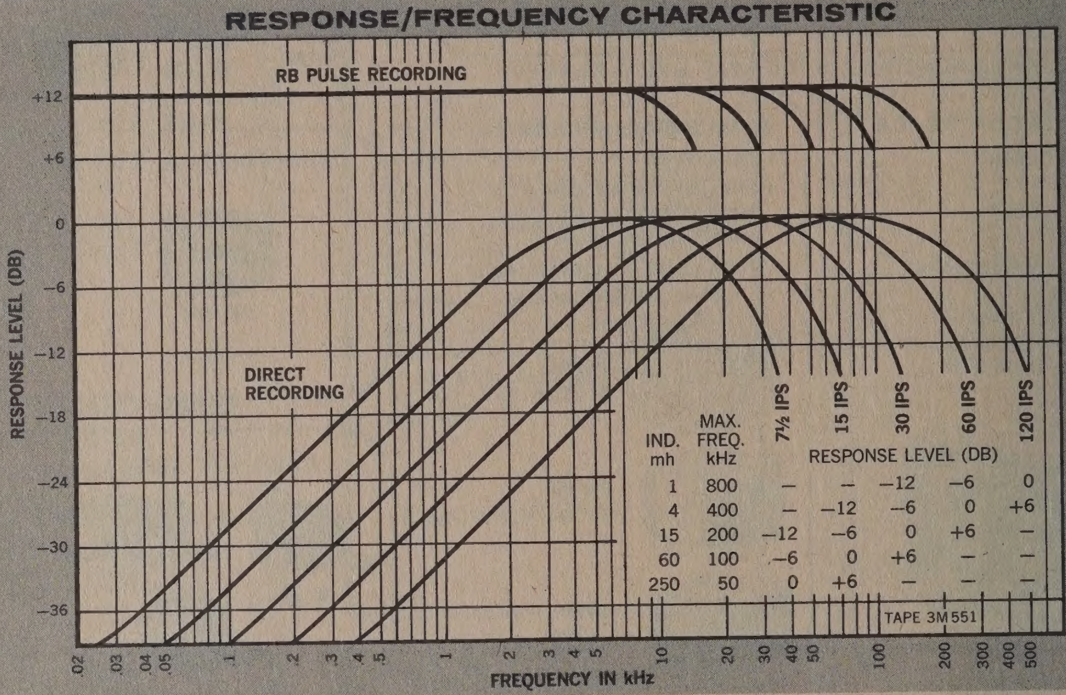
SERIES 2000/7500 ERASE RECORD PLAY

RESPONSE/FREQUENCY CHARACTERISTIC



IND. mh	MAX. FREQ. kHz	7½ IPS	15 IPS	30 IPS	60 IPS	120 IPS
		RESPONSE LEVEL (DB)				
1	800	—	—	−12	−6	0
4	400	—	−12	−6	0	+6
15	200	−12	−6	0	+6	—
60	100	−6	0	+6	—	—
250	50	0	+6	—	—	—

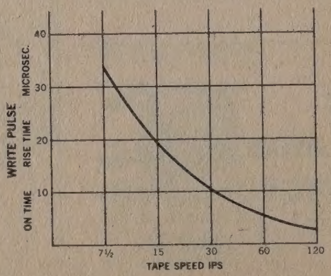
The Response/Frequency characteristics above, illustrate the exceptional performance of the Series 2000 thru 7500 Norton Magnetic Heads in direct and digital recording. The upper curves relate to the readback pulse amplitude for RB (return to bias) writing with the digital models and the lower curves relate to the unequalized playback amplitude of the analog models for constant current direct recording, both as a function of frequency (or rep rate). The five standard impedances available, together with the five tape speeds illustrated, total 25 different curves in each group, too many to clearly represent on a single chart. Pairs of inductance and tape speed are selected, which result in a set of curves peaking at the same level and having upper frequency limits proportional to tape speed. Therefore, the 1 mh inductance record/play response is at 120 ips; the 4 mh at 60 ips, and so on to the 250 mh response at 7½ ips. The other inductances are related to each as set forth in the included table. Each curve is at the same mv level as the others and so enables a quick comparison of level, frequency response, and required tape speed to achieve a desired performance goal. To read the curves, first refer to any Series found on the following pages, and note the Typical Operation data and the 0 DB playback reference level in mv rms for direct recording or +12 DB reference level in mv p-p for RB pulse recording. Then referring to the curves, calculate the response obtainable at the inductance and tape speed contemplated.

DIGITAL RECORDING

Selecting the 5500 Series from the following pages for analysis, the 60 mh track for RB pulse recording has a +12 DB reference level of 10 mv p-p at 15 ips. The readback pulse at 15 ips is 10 mv p-p and constant up to a 15 kHz rep rate, equivalent to a 1000 ppi recording density, with a 20 μsec, 3 ma p-p write pulse (rise time 20 μsec). At a faster rep rate of 30 kHz (2000 ppi) at 15 ips and a 10 μsec, 3 ma p-p pulse (rise time 10 μsec) the readback pulse is 5 mv p-p (10 mv less 6 DB) with all pulses present, and 10 mv p-p for an isolated pulse.

Writing and reading at 7½ ips the readback pulse amplitude of the 60 mh track is 5 mv p-p (10 mv less 6 DB) and flat to 7.5 kHz, with a 30 μsec 3 ma p-p pulse (rise time 30 μsec).

Full output is obtained up to a recording density of 1000 ppi with equal pulse on time and rise time at the values shown in the graph below. Operation up to 2000 ppi at reduced read amplitude requires halving these times. Increasing the times will reduce the recording density and readback level, and is not recommended. A better solution is to choose a lower inductance to preserve the recording density capability.



DIRECT RECORDING

Selecting the 2000 Series from the following pages for analysis, the 15 mh track for direct (bias) recording has a stated playback 0 DB reference level of 1.8 mv rms which at 30 ips is at 30 kHz. At 1 kHz the playback level drops to 0.15 mv rms (21 db below 1.8 mv). Operated at 7½ ips its 1 kHz and 30 kHz levels are both 0.15 mv rms (1.8 mv less 12 db less 9 DB). Increasing the inductance to 250 mh would increase the 1 and 30 kHz play level to 0.6 mv rms (1.8 mv less 9 DB) at 7½ ips. It can be seen that the short wavelength response to over 4000 cpi together with a maximum contour effect deviation of ±2 DB from the 6 DB/octave slope permits a useful bandwidth of over 10 octaves at any tape speed, and with the range of inductances available, permits the highest play level consistent with the frequency range of the system.

STANDARD FEATURES SERIES 2000/7500

Standard features include extremely low crosstalk ratings and +75°C temperature operation without derating, plus a mechanical accuracy permitting hard mount or adjustable mount installation. Rugged solid metal construction, shock and vibration resistant, provides a hard, stable, low friction, long wear surface for the tape. The cores, shields and all metallic members are mechanically and electrically bonded together for effective electrostatic shielding and grounding of static charges. Precision finishing of the recording face to micro-inch tolerance insures intimate contact of the tape with every channel for uniformly excellent response independent of track location.

TERMINATION: Silver plated solder lugs on a high temperature glass-epoxy terminal board are standard on all series. Tracks are numbered from 1 through 28 (bottom to top). Start and finish terminal pairs of each track are correspondingly numbered and located as illustrated.

SELECTIVE ERASE HEADS

Multitrack selective erase heads to match the formats of the NORTON Series 2000/7500 units are available. All heads offer erase track widths at least 10 mils wider than the record tracks to insure full erasure. Outline and mounting dimensions are the same, and a standard 1 mh inductance is stock with other impedances available on request.

Erase heads for the Series 2000 and 3500 heads are a single unit with the same number of tracks and track spacing as the record head. Erase heads for the Series 4500 thru 7500 units consists of a pair of heads, each with double track spacing. Odd number tracks are on one unit, and even number tracks on the other.

Catalog numbers for the erase heads have the same Series number as the record head except for the suffix which changes to 1E as in the following example: Catalog #3510-1E is a 1mh erase head for use with the 10 track 1″ tape head in the Series 3500.

ORDERING INFORMATION

To specify the complete catalog number for ordering purposes designate the Series number of the head you require, the inductance in mh and the function ie. Record (AR) only, Record/Play (ARP), or Play (AP) only for audio and analog applications: or Record (DR) only, Record/Play (DRP), or Play (DP) only for digital applications, as in the following example: Catalog #4507—15 DP which is the Series 4500, 7 tracks, 15mh Digital Play Head for ½″ tape.

Molded bands of tough, highly stable rubber . . . densely impregnated with magnetic oxide . . . smooth-surfaced for minimum head wear . . . an ideal memory system for machine or process-control sequences, data processing, fault recording, repetitive message reporting (over 3,000,000 repeats without failure).

Recorded data is virtually permanent until erased . . . normal operating life well above 10,000 hours at 30 ips.
• Prolonged life • Minimum Head Wear • High Signal/noise ratio • High Fidelity • High Reliability • Low Operating Cost.

In either Hypalon® or extra-tough Adiprene® . . . bands ½″ to 6″ width, 2″ to 18″ diameters.

Whatever your problem involving magnetic media, give us your specifications. Clevite Corporation, Brush Instruments Division,

MAGNETIC BAND FREQUENCY RESPONSE

Brush BK-1090 Record—Reproduce Head.

Speed: 7½ in./Sec.

Record Current: 0.2 Milliamps/Winding (0.4 Milliamps Total)

Bias Current: 1.5 Milliamps/Winding (3.0 Milliamps Total) @ 50 KCPS

Optimum Record Current is taken as that current which produces an output 12 dB down from saturation.

Optimum Bias Current is that current which produces 2% or less third harmonic distortion at 750 CPS record signal.

CLEVITE BRUSH

From the people who pioneered magnetic recording

Brush magnetic heads.

designed and fabricated to your specifications

Brush designs and fabricates magnetic heads to *your* particular requirements . . . from low cost single-track audio models to highly sophisticated multi-track heads and multiple-head assemblies.

- Digital heads in IBM compatible formats, or format of your choice — with packing densities to 6000 fci.
- Wideband instrumentation heads — from IRIG formats to 42 tracks/inch — out to 2MHz.

Full range of electrical characteristics — to your specifications. ■ A quarter-century of experience (Brush developed the first successful magnetic recorder back in 1942) has produced proprietary core and structural designs with pronounced advantages in higher efficiency, reduced crosstalk and crossfeed, extended life, higher resolution. ■ Whatever your problem involving heads, give us your specifications. DEPENDABLE . . . STANDARDIZED . . . INSULATORS, SUPPORTS, COOLING EQUIPMENT AND CONDENSERS FROM LAPP

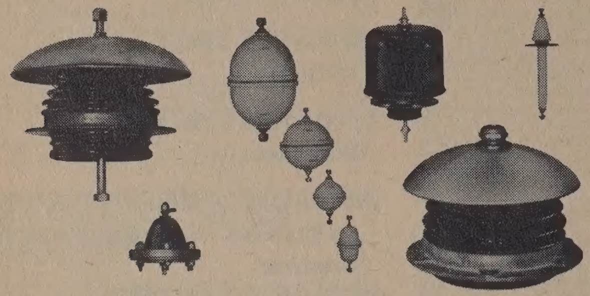
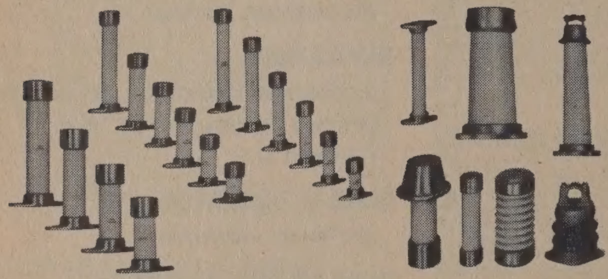
LAPP ENTRANCE INSULATORS—in a wide range of sizes



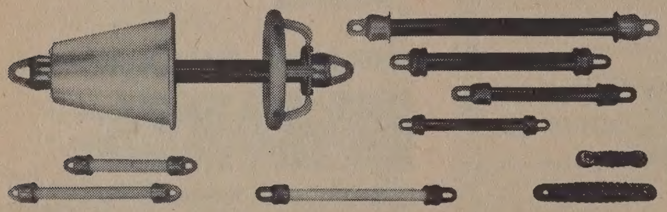
Lapp pioneered in manufacturing heavy duty entrance insulators, and these years of experience assure you maximum dependability and efficiency. These proven insulators are available in porcelain and steatite and a great variety of types for almost every electrical and mechanical requirement.

LAPP STAND-OFF INSULATORS



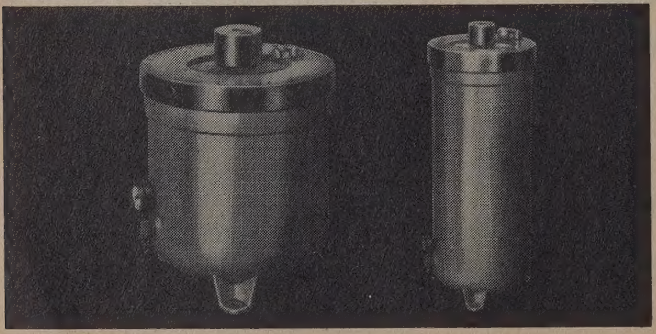
Lapp offers stand-offs in a tremendous selection of standard insulators. Specials? We've designed and produced literally hundreds for the radio, television and electronics industries. The ceramic used in these insulators is the same porcelain or steatite used in large radio and transmission insulators.

LAPP ANTENNA STRAIN INSULATORS



Lapp offers a complete, standard series of insulators for most electrical and mechanical applications, up to 12,000 lbs. strength. Other small units, in porcelain or steatite, are also available as strains and spreaders. Special large strain insulators have been made by Lapp up to 12,000 lbs. strength and 750 kv wet flashover.

LAPP GAS-FILLED CONDENSERS—for duty at high voltages & high currents

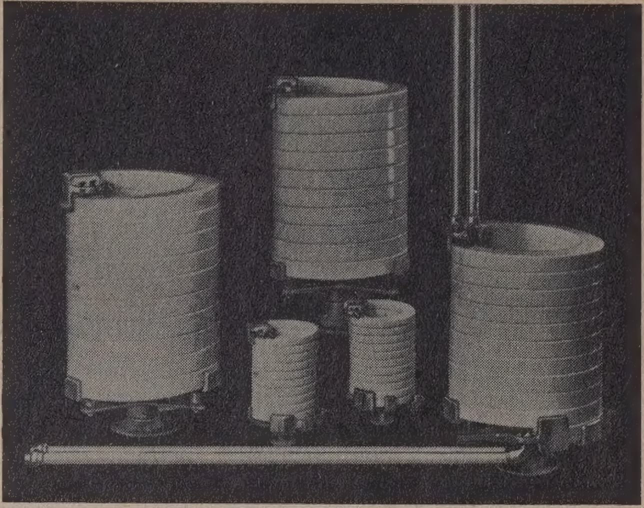


Have low loss, high safety factor in a compact, high efficiency condenser that is unaffected by temperature, moisture or dust conditions. They are available in four tank diameters (7″ to 18″) both fixed and variable. They can be supplied in current and voltage ratings that cover all requirements in the induction heating and radio transmitter fields, up to 85 kv peak safety gap settings and 500 amp current. Tuning on variable models is at ground potential. Write for Bulletin 302.

INSULATION FOR WATER-COOLED SYSTEMS

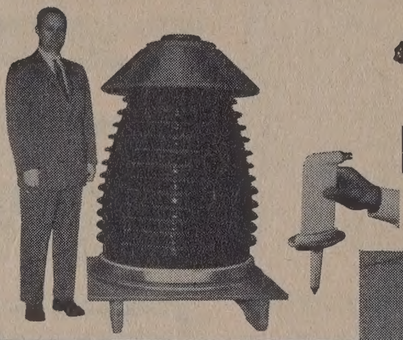
Porcelain Water Coils—for water-cooled power tubes. Lapp porcelain water coils are ideal where cooling water must undergo a change in potential. They provide superior insulation, and eliminate troubles caused by water contamination, conductivity and sludging associated with various types of tubing. Available in a number of standard sizes, assuring optimum water flow and long tube life. They are a permanent investment in a completely trouble-free cooling system.

Lapp Porcelain Pipe—for cooling systems where coils cannot be accommodated. This pipe can be installed on wall, overhead, or under floor of the cubicle. Excellent where water flow rate must be exceptionally high. Available in a range of standard sizes, allowing maximum design freedom.



SPECIALS . . . BY LAPP

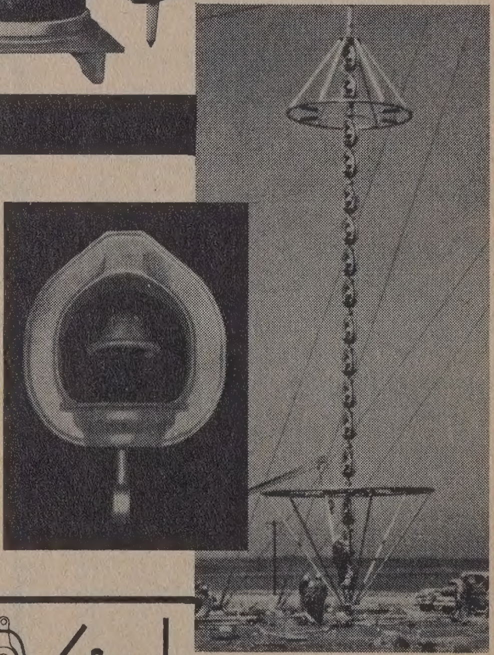
Our basic business is electrical porcelain. Lapp has been designing and manufacturing it for over 45 years. We've solved many tough problems with engineering ingenuity and production ability. Shown here are some of the thousands of special pieces developed. Your requirements become our specifications. Lapp makes special assemblies with economy, to perform with efficiency. Send us your insulator requirements.



LAPP ANTENNA TOWER INSULATORS

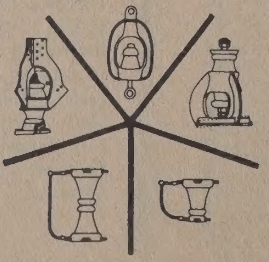
Shown here are giant antenna insulators designed and manufactured for U.S. Navy radio transmitter installation in Northern Maine. Lapp made use of known components to make the design meet electrical requirements. There are 16 insulator units in each string, weighing almost 7½ tons per string! Strings are suspended almost 1000 feet in the air and subjected to all kinds of atmospheric and weather conditions. Development of these highly specialized insulators took considerable time . . . testing alone lasted over a year! This highly unusual project is indicative of the capabilities of Lapp Insulator Company.

Lapp insulators support most of the world's large radio towers, both self-supporting towers and guyed masts. Our tower base insulators have been design-tested up to 9,000,000 lbs.!



Triple insulator tower base assembly—ultimate strength 9,000,000 lbs.

Typical base insulator for guyed mast. Ultimate strength up to 3,000,000 lbs.



Sketches of some of the standard design tower, mast base and guy insulators available.
